- COP 440-WZF/N (single-chip N-CHANNEL Microcontrollers)
COP 440-WZF/N is 2K x 8 ROM AND EMPLOY 160 x 4 RAM.

- ANALOG SWITCH IC (IC 102/103, TC9164N/9163N)

(1) TIME CHART

- TC9164N's and TC9163N's data are consist of 14 Bits.
First 8 Bits (1 - 8) match with analog SW's (1 - 8) and port is "H"
in ON condition.
Next 2 Bits (9 - 10) are for L/R-CH selection.
Last 4 Bits (11 - 14) are code Bits for selecting chip.

This is a comprehensive electronic schematic for a portable stereo receiver. The circuit is organized into several functional blocks:

- Power Section:** Located at the bottom right, it includes a power transformer (P1801) and a full-wave bridge rectifier (D801-D804) to convert AC from the power cord into DC. A 500V 1000µF electrolytic capacitor (C801) is used for power filtering.
- Regulation and Filtering:** The DC supply is regulated by an LM317 (IC801) and filtered by a 1000µF capacitor (C802). A 270Ω resistor (R801) is connected to the ADJ pin of the regulator.
- Remote Control Interface:** A central "REMOTE BOX" contains a 4017 decade counter (IC101) and a 555 timer (IC102) to decode infrared signals from a remote control. The remote control has 28 buttons labeled K1 through K28, including functions like POWER, PHONO, TUNER, CD, STOP, and various preset stations (K1-K10).
- Audio Amplification:** The signal path starts with a pre-amplifier stage using a JFET (2N3866, IC103) and an op-amp (IC104). This is followed by a main audio amplifier stage using a 741 op-amp (IC105). The output is connected to a speaker (S1) and a headphone jack (J501).
- Frequency Synthesis and Tuning:** The tuner section (IC106) includes a PLL synthesizer (IC106) and a VCO (IC107) to generate the required radio frequencies. It also includes a PLL lock detector (IC108) and a PLL phase-locked loop (IC109).
- Signal Processing:** The circuit includes a PLL lock detector (IC108) and a PLL phase-locked loop (IC109) to ensure accurate frequency tuning and lock detection.
- Other Components:** The schematic includes numerous resistors (R1 through R800) and capacitors (C1 through C800) for biasing, timing, and signal conditioning. It also features a 3.5mm stereo jack (J301) for external audio input.

The diagram is a detailed representation of the internal circuitry, showing the interconnections between all components and their respective values and pin configurations.
